

Compass® Destination Management

A solution for every building

OTIS

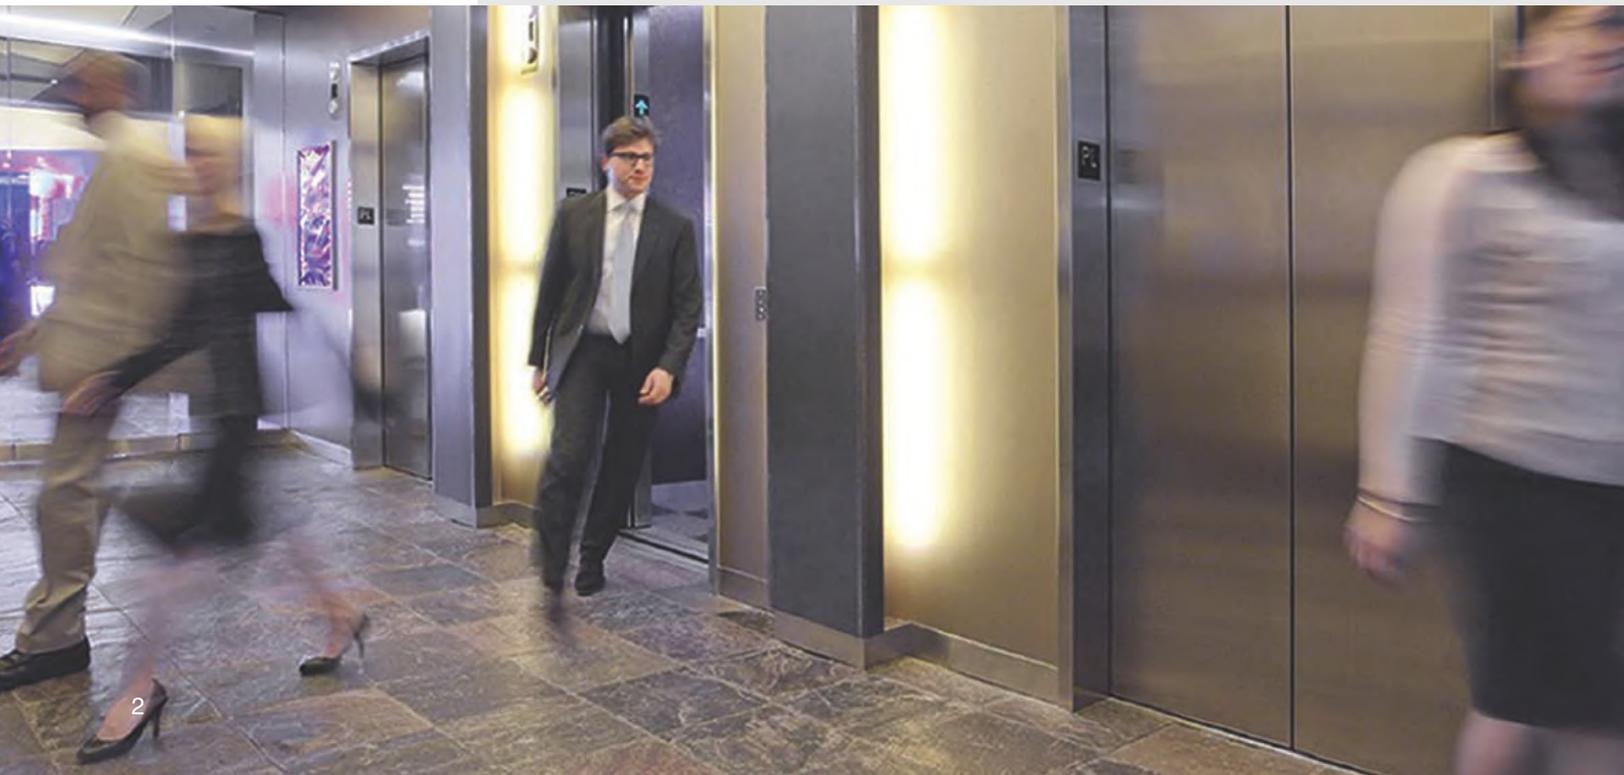

It's about the journey and the destination

Whether for a new building or improving traffic flow in an existing building, Otis will ensure the Compass destination management system is tailored to meet your needs to set your building apart from the rest. From in-depth traffic analyses to architectural options, our experts will recommend a Compass solution that seamlessly integrates into your building's design while delivering the performance you expect.

The Compass system delivers a more intelligent solution. Simply enter your destination floor for the fastest, most direct and least crowded route to your destination.

Enjoy the advantages of the Compass system:

- **Efficiency**
Quick, orderly travel and optimized building operations
- **Personalized service**
Comfortable and enhanced passenger experience
- **Customizable solutions**
Flexible options to meet individual building design, traffic and security requirements

And it's about time

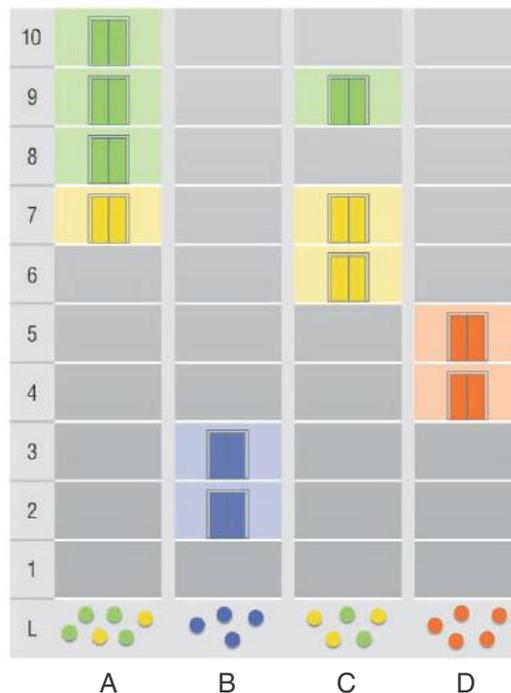

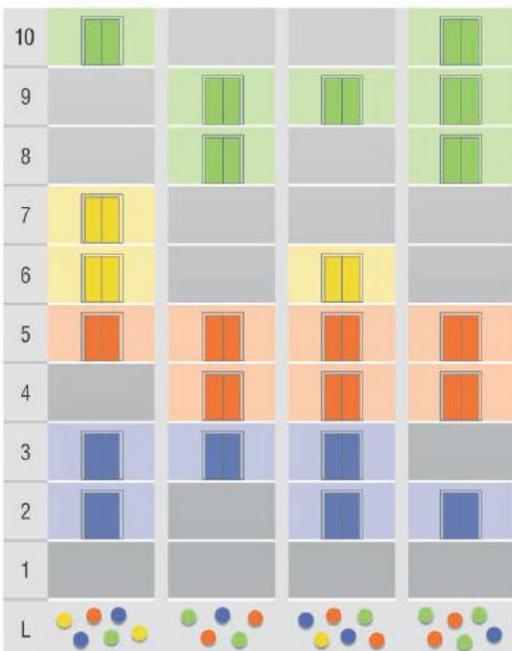

Whether it's the morning rush or a busy lunch hour, the Compass system provides the quickest, most efficient means to your destination all day long. Using Otis' patented, advanced technology, the system constantly evaluates real-time passenger traffic and dynamically adjusts floor sectoring to deliver the service you need when you need it.

Conventional systems

- Disorganized lobbies with crowds of passengers
- Overcrowded elevators
- Too many stops per trip
- Increased travel and waiting times

Compass destination management

- Organized lobbies with orderly traffic flow
- Less car crowding
- Fewer stops per trip
- Less waiting time
- Less travel time in elevators
- Improved efficiency and performance

The next best thing to a personal elevator

The Compass system will speed you on your way with efficient, personalized service. It helps you avoid the crowds, skip stops, and get where you're going without the extra wait.

The system ensures an easy trip for every passenger. For passengers with disabilities, features include standard Braille keypads, voice instructions and floor announcements, and additional time to enter and exit the elevator for greater accessibility.

1

Enter your destination floor

Instantly receive a personalized elevator assignment based on your requested floor.

2

Proceed to your assigned elevator

As you head to your assigned elevator, it's already on its way to meet you.

3

Enter assigned elevator

Confirm your floor destination on the easy-to-read indicators on the elevator doorjamb.

4

Travel to your designated floor

The Compass system reduces your travel time and ensures you have a more comfortable ride – with fewer people per car and stops per trip.

Customizable options to enhance your building's operation

Flexible solutions to meet unique design requirements

Not all buildings are the same so the Compass system provides an array of solutions to meet your building's specific travel needs, including:

- Multiple elevator banks
- Lobbies and parking entrances on multiple floors
- Single- and double-deck elevators
- Destinations requiring use of rear elevator doors

Greater control of traffic management

The system delivers the functionality needed to provide flexibility to building managers and tenants and enhance overall traffic flow, including:

- Personalized destination requests for visitors
- Interactive directories to easily locate tenants
- Express service for special tenants and visitors
- Ability to designate specific elevators for deliveries or other building needs
- Greater accessibility for passengers with special needs such as extended boarding times and assignments to the closest elevator

Security and building management simplified

Streamline building management with the Compass system's security options and the EMS Panorama™ system.

The optional Compass Secure Entry system is specifically designed to integrate building security and elevator-dispatching systems. With the presentation of a security credential, tenants gain access to a touchscreen enabling them to select their destination floor and receive instant car assignments.

The system also allows building managers to manage tenant travel between floors through the interface to the building's security system or the EMS Panorama system. This interfloor traffic management feature, as well as pin codes and passenger separation features, allows building managers to customize and control floor access to enhance passenger security and comfort.

The EMS Panorama system also provides building owners and managers with a new level of reporting, control and performance. Among the many Compass-specific features, it allows users to customize touch-screen displays and directories and enter destination requests for visitors.

Designed to fit and set your building apart

The Compass destination entry system is designed to be seamlessly integrated into a variety of architectural environments and to deliver the performance you need. Otis offers flexible configurations from lobby-only to full-building installations.

The Compass system also delivers many choices when it comes to aesthetics. Choose from keypads for a high level of accessibility for passengers with disabilities or customizable touch screens with sophisticated graphic displays. Other options include in-car annunciators to reassure passengers of served floors and concealed or fully accessible car operating panels.
